

123 Main St, Springfield IL 62701 · (217) 555-0143

Encounter date: 2026-04-19

Patient: **Doe, Jane R.** · MRN: **00831742** · DOB: 1957-03-14 (68F)
· Sex: Female

Indication

Acute decompensated heart failure; reassessment of LV function.

Study Details

Date: 2026-04-19 · Sonographer: J. Patel, RDCS · Reading physician: M. Reyes, MD · Image quality: adequate · Rhythm during study: atrial fibrillation.

Measurements

LV end-diastolic diameter 5.8 cm · LV end-systolic diameter 4.6 cm · LV ejection fraction (biplane Simpson's) 30% · LA volume index 42 mL/m² · RV size and systolic function normal · TAPSE 1.9 cm.

Findings

Left Ventricle: Mildly dilated. Severe global LV systolic dysfunction. Estimated LVEF of 30%. Global hypokinesis with regional akinesis of the anterior wall and apex.

Right Ventricle: Normal size and systolic function.

Atria: Left atrium moderately dilated. Right atrium mildly dilated.

Valves: Mitral valve with moderate functional regurgitation due to annular dilation and tethering. Aortic valve trileaflet, no significant stenosis or regurgitation. Tricuspid valve with mild regurgitation, estimated PASP 38 mm Hg.

Pericardium: No effusion.

Conclusions

1. LVEF 30% with severe global LV systolic dysfunction.
2. Moderate functional mitral regurgitation.
3. Moderate left atrial dilation, consistent with chronic atrial fibrillation.
4. No pericardial effusion.
